

# 355 3-Zone Drying Shoe Sanitizer System 3-Zone

Clean, Disinfect & Dry in a contained wet shoe dip delivery system

It's never been easier to disinfect shoes with this 3 zone shoe sanitizer system. This disinfectant shoe mat not only will safely clean and sanitize shoes, but quickly dry them the moment you step out. Cleaning Zone 1 acts as the shoe scraper to help remove dirt, grime and organic matter to better sanitize shoes. Disinfecting Zone 2 has a removable tray to be filled with a disinfect mat solution. While saturating the bottom of shoe soles, the mat insert has fibers help guide the solution into deep shoe treds. Drying Zone 3 uses a highly absorbent berber to provide quick drying and slip prevention after disinfecting shoes. The shoe sanitizer system comes with instructional messaging, making it ideal for entrances for schools, businesses, facilities, and even homes. The system contains adhesive backed disposable carpets for quick and easy cleaning and installation. Disinfecting shoes provides the peace of mind by reducing the amount of bacteria and virus spread from the soles of shoes.
