- Provides greater thickness for resistance to cuts and scrapes in high-traffic areas.
- Durability in forklift and industrial vehicle traffic areas.
- Aggressive adhesive performance when you need it, easy removal when you don't.
- Tapered edges to minimize "pick points" and traffic bumps.
- Easy installation with minimal tools.
- Can be applied using the Area Marking Tape Applicator (part number 804314.)
- Service range: 0° F - 140° F (50° F minimum application temperature)
- Material: vinyl
- Adhesive Type: permanent acrylic
- Finish: gloss
- Labels per roll: 1 roll (continuous)
- Roll length: 100 ft
- Thickness: 0.05"

**Discontinued item, only available while limited supplies last. Call for more information.**

## Floor Marking Color Standards Guide

Enhance visual recognition and efficiency with a clear color-coding system. While ANSI Z535.1 (safety signs) and OSHA 1910.144 (fire and physical hazards) offer some guidance, they don't fully address floor markings—so it's up to you to build a consistent system. The chart below shows a widely used guide that aligns with key elements of both standards.

### Regulations & Industry Standards To Know:

**Letter of Interpretation OSHA CFR 1910.22(b)(2):** The lines used to delineate aisles may be any color so long as they clearly define the area considered as aisle space. The lines may be continuous or be composed of dots, squares or strips. The recommended width of aisle markings varies from 2" to 6" (any width 2 in. or more is considered acceptable).

**Use of Mechanical Equipment OSHA CFR 1910.176(a):** Where mechanical handling equipment is used, sufficient safe clearances shall be allowed for aisles, at loading docks, through doorways and wherever turns or passage must be made. Aisles and passageways shall be kept clear and in good repair, with no obstruction across or in aisles that could create a hazard. Permanent aisles and passageways shall be appropriately marked.

### General Environmental Controls

**OSHA CFR 1910.144(a)(1):** Red shall be the basic color for the identification of fire protection equipment and apparatus, containers of flammable liquids, stop buttons and electrical switches used for emergency stopping of equipment.

**OSHA CFR 1910.144(a)(3):** Yellow shall be the basic color for designating caution and marking physical hazards.

Color	Area
	Aisleways, traffic lanes and work cells
	Equipment and fixtures not otherwise color-coded (workstations, carts, floor stand displays, racks, etc.)
	Materials and components, including raw materials, work-in-progress and finished goods
	Materials or products held for inspection
	Defects, scrap, rework and red tag areas
	Steps and perimeter demarcation to identify egress routes in lights-out emergencies
	Areas to be kept clear for safety/compliance reasons (areas in front of electrical panels, firefighting equipment and safety equipment, such as eyewash stations, safety showers and first aid stations)
	Areas to be kept clear for operational purposes (not related to safety and compliance)
	Areas that may expose employees to special physical or health hazards
